

Abstract of the Disclosure

An information processing system and an information processing method capable of improving reliability and convenience and maintaining the reliability high are provided. The information processing system for processing unit data including a plurality of information elements partitioned at predetermined divisions, includes: a division processing section 102 dividing the unit data into the plurality of information elements based on the divisions; a condition determination section 103 supplied with a select condition, and selecting the information element conformable to the select condition from among the plurality of information elements obtained by dividing the unit data; and a notification section 104 notifying a user of the information element selected by the condition determination section. This system preferably includes an extraction processing section 203 allocating a logical structure to each of the information elements divided by the division processing section, the logical structure indicating a meaning of each information in each of the information elements.
